Operating instructions

for vented tumble dryer
T 8722

To avoid the risk of accidents or damage to the appliance it is essential to read these instructions before it is installed and used for the first time.
Caring for the environment

Disposal of the packing material

The transport and protective packing has been selected from materials which are environmentally friendly for disposal and should be recycled.

Ensure that any plastic wrappings, bags, etc are disposed of safely and kept out of the reach of babies and young children. Danger of suffocation.

Disposal of your old appliance

Electrical and electronic appliances often contain materials which, if handled or disposed of incorrectly could be potentially hazardous to human health and to the environment. They are, however, essential for the correct functioning of your appliance. Please do not therefore dispose it with your household waste.

Please dispose of it at your local community waste recycling centre or contact your dealer for advice. Ensure that it presents no danger to children while being stored for disposal.

Energy saving tips

To avoid unnecessarily long drying times and high consumption of energy:

- Make sure that your laundry is thoroughly spun before drying. The higher the spin, the greater the savings that can be made in energy and time during drying.

- Load according to the optimum amount of laundry recommended for the programme being used (see "Programme chart"). Underloading is uneconomical. Overloading gives a poorer quality of drying and may cause unnecessary creasing.

- Make sure the room in which the dryer is located is well ventilated.

- Make sure the fluff filter is clean before using the dryer.

- Check all parts of the ventilation system on a regular basis and remove any build up of fluff etc.

- The vent ducting should be as short, straight and smooth as possible to minimise any resistance to the air throughflow.

It is essential to read these instructions.

This tumble dryer complies with current safety requirements. Inappropriate use can, however, lead to personal injury and damage to property.

To avoid the risk of accidents and damage to the tumble dryer, please read these instructions carefully before using it for the first time. They contain important information on its safety, installation, use and maintenance.

Keep these instructions in a safe place and ensure that new users are familiar with the content. Pass them on to any future owner.

Correct application

This tumble dryer is intended for use in domestic households and similar working and residential environments.

The tumble dryer is not intended for outdoor use.

It must only be used as a domestic appliance to dry items which have been washed in a water solution and which are marked on the manufacturer's care label as being suitable for tumble drying. If using dry cleaning kits, do so at your own risk, and follow the instructions provided on the packaging. Any other usage is not supported by the manufacturer and could be dangerous. Miele cannot be held liable for damage resulting from incorrect or improper use or operation.
The tumble dryer can only be used by people with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, if they are supervised whilst using it or have been shown how to use it in a safe way and recognise and understand the consequences of incorrect operation.

Safety with children

Children under 8 years of age must be kept away from the tumble dryer unless they are constantly supervised.

Children 8 years and older may only use the tumble dryer unsupervised if they have been shown how to do so in a safe way and recognise and understand the consequences of incorrect operation.

Children must not be allowed to clean or maintain the tumble dryer unsupervised.

Please supervise children in the vicinity of the tumble dryer and do not let them play with it.
Warning and Safety instructions

Technical safety

▶ Before setting up the tumble dryer, check it for any externally visible damage. Do not install or use a damaged tumble dryer.

▶ Before connecting the tumble dryer, ensure that the connection data on the data plate (voltage and frequency) match the mains electricity supply. If in any doubt, consult a qualified electrician.

▶ The electrical safety of this tumble dryer can only be guaranteed when correctly earthed. It is most important that this basic safety requirement is observed and regularly tested, and where there is any doubt, the household wiring system should be inspected by a qualified electrician. Miele cannot be held liable for the consequences of an inadequate earthing system (e.g. electric shock).

▶ Do not connect the tumble dryer to the mains electricity supply by an extension lead. Extension leads do not guarantee the required safety of the tumble dryer (e.g. danger of overheating).

▶ If the electrical connection cable is faulty it must only be replaced by a Miele approved service technician to protect the user from danger.

▶ Unauthorised repairs could result in unforeseen dangers for the user, for which Miele cannot accept liability. Repairs should only be undertaken by a Miele approved service technician, otherwise any subsequent damage will not be covered by the guarantee. Ensure current is not supplied to the tumble dryer until after maintenance or repair work has been carried out.
Faulty components must only be replaced by genuine Miele original spare parts. Only when these parts are fitted can the safety standards of the tumble dryer be guaranteed.

The tumble dryer must be isolated from the electricity supply in the event of a fault and during cleaning and maintenance.

In areas which may be subject to infestation by cockroaches or other vermin, pay particular attention to keeping the tumble dryer and its surroundings in a clean condition at all times. Any damage which may be caused by cockroaches or other vermin will not be covered by the guarantee.
Warning and Safety instructions

This tumble dryer may only be used in mobile installations such as ships if a risk assessment of the installation has been carried out by a suitably qualified engineer.

The appliance may only be operated when the following conditions are met:
- the ship’s hull is longer than 28 metres.
- the list of the vessel is not more than 2°.
- any external vibration is no more than 150 Hz at an amplitude of 0.35 mm.

The safe operation and correct functioning of the appliance can only be guaranteed if the above conditions are met.

The appliance may not be operated on an open deck.

Appliances not marked with the CSA C/US Safety Label comply with European safety regulations. These dryers must not be operated in the USA.

Before installing this appliance, the installer must ensure that the installation guarantees safe operation of the appliance.

The appliance must be fixed in position when it is installed. Failure to do this could result in personal injury and damage to property.
Please observe the instructions in "Installation and connection" and "Technical data".

The socket must be easily accessible after installation in order to disconnect the tumble dryer from the electricity supply.

Do not block the gap between the base of the tumble dryer and the floor with plinth facings, deep pile carpet etc. as this would hinder a sufficient intake of air.

Make sure the tumble dryer door can be opened without hindrance after installation.

**Correct use**

The maximum load of dry laundry for this tumble dryer is 7 kg. See the Programme chart for the maximum recommended loads in individual programmes.

Fire hazard.
The tumble dryer must not be connected to a controllable socket (e.g. a timer switch or a peak load shut-off device). If the drying programme were to be interrupted before the end of the cooling down phase, the laundry could self-ignite.
To prevent the risk of fire, the following textiles must not be dried in this appliance:

- items which have not been washed.
- items, such as workwear, which have not been thoroughly cleaned and which are still soiled with grease, oil or other deposits (such as cosmetics, lotions etc).
  If items have not been thoroughly cleaned there is a danger that these might self-ignite when heated, even after they have been removed from the tumble dryer at the end of the programme.
- items (e.g. mops and floor cloths) which have been treated with inflammable cleaning agents or which contain residues of acetone, alcohol, benzine, petrol, kerosene, stain remover, turpentine, wax, wax remover or other chemicals.
- items which have been splashed with hair lacquer, hair spray, nail varnish remover or similar substances.

When washing such heavily soiled items, ensure that you use additional detergent and select a high temperature. If in doubt, wash the items several times.

Remove all items such as lighters and matches from pockets.

**Warning**: Do not switch the tumble dryer off before the drying programme has finished. If this is done, the laundry must be hung up or spread out to cool it down.

**Fabric conditioner and similar products must be used according to the instructions on the manufacturer's packaging.**
To prevent the risk of fire, the following must not be tumble dried:

- items which have been cleaned using chemicals (e.g. professional dry-cleaning agents).
- fabrics which contain a large proportion of rubber, foam rubber or rubber-like materials. For example, products made from latex foam rubber, shower caps, waterproof textiles, rubberised articles and items of clothing and pillows with foam rubber filling.
- damaged items which contain padding or fillings (e.g. pillows, jackets). When damaged, the filling can get out with the risk of igniting in the tumble dryer.

In many programmes, the heating phase is followed by a cooling down phase to ensure that the items remain at a temperature which will not damage them and so that they are not too hot to handle when you remove them (this also avoids the danger of the laundry self-igniting). The programme is not finished until the cooling down phase has been completed. As soon as the programme has finished, remove all laundry from the drum.

- Do not let anyone sit or lean on the door, as this can cause the tumble dryer to tip up.

- Always close the doors after use. This way you will avoid the danger of:
  - children climbing into the tumble dryer or hiding things in it.
  - pets or other small animals climbing into it.
The tumble dryer must not be used without the fluff filter in place or if the fluff filter is damaged in any way.

The fluff filter must be cleaned regularly.

The tumble dryer must not be used without vent ducting in place.

The tumble dryer must not be connected to a chimney or vent flue which is in use.

Do not install the tumble dryer in a room where there is a risk of frost occurring. At temperatures around freezing point the tumble dryer may not be able to operate properly. The ambient room temperature should be between +2°C and +35°C.

Check all parts of the extraction system on a regular basis (e.g. wall vent, external grille, bends in the ducting etc.) and make sure they are all free of any hindrance. A build-up of fluff will prevent a free flow of air through the system. If the tumble dryer is to be connected to an existing ducting system, this must be checked for suitability beforehand.

The exhaust air must not be vented into a chimney or vent flue which is in use, nor should it be connected to ducting which ventilates rooms with fireplaces. If this was done, there would be a danger of smoke or exhaust fumes being drawn back into the room.
Adequate ventilation is essential to avoid the danger of asphyxia and toxic fumes where another appliance which also uses the room air (e.g. gas, oil or coal fired heater, continuous flow or other water heater) is installed in the same or an adjacent room. To ensure safe operation, and to prevent gases given off by these appliances being drawn back into the room, an underpressure of 4 Pa is the maximum permissible. Ventilation can be maintained by:

- air inlets in the external wall which cannot be closed or blocked,
  or
- by fitting a window contact switch which ensures that the tumble dryer can only be operated when the window is open.

To ensure safe operation of your tumble dryer and to avoid an underpressure of 4 Pa or more, please seek professional advice.

Always keep the area around the tumble dryer clean and free of dust and fluff. Dust and dirt drawn into the dryer can cause blockages.

The tumble dryer must not be hosed down.
Accessories

- Only use genuine Miele original spare parts and accessories with this tumble dryer. If non-Miele parts are used, guarantee, performance and product liability claims may be invalidated.

- A Miele tumble dryer can be stacked on top of a Miele washing machine using the appropriate stacking kit (available as an optional accessory). Please make sure you order the correct one for the Miele tumble dryer and Miele washing machine.

- If installing the tumble dryer on a Miele plinth, (available as an optional accessory), please make sure you order the correct one for this tumble dryer.

⚠️ Miele cannot be held liable for damage caused by non-compliance with these Warning and Safety instructions.
### Control panel

1. **Low temperature button**
   Delicate fabrics are dried at a lower temperature.

2. **Drying level button**
   with indicator lights to show the drying level selected.

3. **Display**
   See next page.

4. **Delay start button**
   This button is used for:
   - Delaying the start of a programme
   - Selecting the duration of the timed drying *Warm air* and *Cool air* programmes

5. **Buzzer button**
   An audible tone sounds at the end of the programme.

6. **Perfect Dry indicator**
   For all programmes with a selectable drying level. See next page.

7. **Check lights**
   For a description of these, see "Problem solving guide" / "After sales service".

8. **Start/Stop button**
   For starting or cancelling a programme. The button flashes while a programme is being selected and then lights up constantly when the programme has started.

9. **Programme selector**
   with indicator lights to show the programme selected.

10. **Door button**
    Pressing this button will open the door even when the dryer is switched off at the mains.

11. **On/Off button**
    For switching the dryer on and off.
Operating the tumble dryer

The display shows:

- Programme duration
- Programme stage
  - Drying
  - Cooling down
  - Finish
- Check and fault messages

The following are also selected via the display:

- Duration of the Warm air and Cool air programmes
- Delay start
  - You can select a programme and set it to start at a later time. The programme will start automatically once the delay start time has elapsed.
- Programmable functions
  - Default settings can be altered to adapt the dryer to different requirements. See "Programmable functions" at the end of this booklet for more details.

Perfect Dry indicator

The Perfect Dry system measures the residual content in the laundry in the sensor drying programmes to ensure perfect drying results.

After a programme has started, the electronics will estimate the duration of the programme (time remaining). The Perfect Dry indicator will flash while this is happening. After a short while, the programme duration will appear in the display and the indicator will go out.

The Perfect Dry indicator will light up again when the selected drying level is reached and remain on until the programme is finished.

The Perfect Dry indicator does not light up during time controlled programmes: Woollens handcare, Cool air, Warm air, Gentle smoothing.

Programme duration / Estimated time remaining

The estimated duration (time remaining) will appear in the display. The following factors all affect the estimated time remaining: residual moisture content after spinning; type of fabric; size of load; room temperature; fluctuations in power supply.

The electronics continually assess conditions in the dryer and adjust the estimated time remaining for a more accurate reading. Because of this, the time displayed can alter during the course of a programme. Programmes can also finish earlier than expected, if, for example, particularly fine fabrics are being dried, the load is very small or items were partially dry beforehand.

Tips on drying

- Always observe the maximum recommended loads given in the “Programme chart”. Never overload the drum.

  Overloading can cause unnecessary wear and tear to the laundry, give a disappointing drying result and cause more creasing.

- Do not put soaking wet items into the tumble dryer. Spin fabrics for at least 30 seconds before drying.

- Open jackets so that they can dry evenly.

- Use the *Automatic plus* programme for drying mixed loads of cotton and minimum iron fabrics.

- Woollens and wool blends tend to become matted and shrink if dried in a tumble dryer. They can, however, be “fluffed up” using the *Woollens handcare* programme.

- Down-filled garments have linings which have a tendency to shrink, depending on the quality of the item. They can be partially dried using the *Gentle smoothing* programme.

- Pure linen should only be machine dried if specified as suitable by the manufacturer on the care label, as the surface of the fabric may otherwise become rough.

- Loopknit garments (e.g. T-shirts and underwear) tend to shrink depending on their quality. Do not over-dry these textiles. When purchasing these garments it is advisable to take their shrinkage properties into account.

- Minimum iron fabrics tend to crease more, the larger the load. This is also the case for garments made from very fine weave fabrics, such as shirts or blouses. If in doubt, divide the garments into smaller loads.

- Starched laundry can be dried in the tumble dryer. To achieve the usual finish, double the amount of starch should be used.

- New dark coloured garments should be washed and dried separately from light coloured garments to avoid the danger of colours running and discolouring other garments or even plastic components in the dryer. Dark coloured fibres can also settle on light coloured garments and vice versa.
How to dry correctly

Brief instructions
The headings numbered (1, 2, 3 ...) show the operating sequence and can be used as a brief guide to using your dryer.

1 Sort the laundry
To ensure an even drying result sort laundry according to:

- the drying level required
- the type of fibre or weave
- size
- the moisture content after spinning.

Make sure that objects e.g. detergent dispensing balls have been removed from the laundry. They could melt, and cause damage to the dryer or the laundry.

- Check seams and stitching to ensure that padding and linings are intact.
- Fasten duvet covers and pillow cases to prevent small items from being trapped inside them.
- Fasten hooks and eyes etc.
- Tie fabric belts and apron strings.
- Sew in or remove underwiring from bras.

2 Turn on the tumble dryer

- Switch the dryer on by pressing the On/Off button in.

The tumble dryer may be switched on after loading, saving energy as the light will not come on.

3 Load the tumble dryer

- Press the Door button to open the door.
- Load the laundry loosely into the drum.

Do not overload the drum. See the "Programme chart" for recommended loads for each programme. Overloading can cause unnecessary wear and tear to the laundry and give a disappointing drying result.

- Before closing the door make sure the fluff filter is correctly positioned.

Check the laundry is right inside the drum so that it cannot get trapped or damaged when the door is shut.

- Shut the door either with a gentle swing, or lean against it and push it shut.
4 Select a programme

Select the programme you want.
The indicator for the programme selected will light up.
A drying level or extra option indicator may also light up and the duration may also be displayed.

Drying level programmes
- Cottons, Minimum iron, Express, Automatic plus, Denim, Shirts

Note
You can extend the range of the drying levels for some programmes (see "Programmable functions").

Woollens handcare, Gentle smoothing, Proofing, Cottons
- This programme cannot be changed.

Selecting the duration of the timed drying Cool air and Warm air programmes

The indicator light for the Delay start button will flash when the Cool air or Warm air programme is selected.

Press the Delay start button repeatedly until the required duration shows in the display.

You can select the duration in stages for:
- Cool air: from 20 minutes up to 1:00 hour.
- Warm air: from 15 minutes up to 2:00 hours.

Select any Extra options / Delay start

Low temperature, Buzzer and Delay start (see "Extra options/Delay start") are selected by pressing the appropriate button.
Anti-crease (see next page) is permanently switched on.

N.B.: It is not possible to select Delay start when using the Warm air or Cool air programmes.
How to dry correctly

6 Start the programme

The Start/Stop button will flash when a programme is being selected. The flashing indicates that a programme can be started.

Press the Start/Stop button.

The Start/Stop button will now light up constantly.

The Perfect Dry indicator will flash or light up constantly with the sensor controlled drying programmes. It will not come on at all with timed drying programmes (see "Operating the tumble dryer").

Note: The duration shown in the display is an estimate and can vary.

Before the end of a programme

There is a cooling down phase at the end of the drying sequence (Cooling down will appear in the display). The programme will not finish until the cooling down phase has been completed.

There is no cooling down phase at the end of the Woollens handcare programme.

7 Remove the laundry when the programme has finished

0 and Finish will appear in the display to indicate that the programme has finished. The buzzer (if selected) will sound at intervals.

The drum will continue to rotate at intervals for up to two hours to prevent laundry creasing, if you do not wish to remove it immediately (anti-crease). There is no anti-crease phase at the end of the Woollens handcare programme.

Press the Door button.

Open the door.

Remove the laundry.

Check that all items have been removed from the drum. If items are left in the dryer, they could be damaged by overdrying when the dryer is next used.

If the dryer is switched on at the mains and the door is opened, the drum lighting will come on. It will go out a few minutes later to save energy.

Switch the dryer off by pressing the button.

After every cycle, remove the fluff from the fluff filter in the door.

Close the door.
Extra options / Delay start

Extra options

Low temperature
Delicate and minimum iron fabrics with the symbol on the care label (e.g. acrylic garments) are dried at a lower temperature. The programme duration is longer.

On some programmes Low temperature is permanently activated and so cannot be deselected.

Buzzer
A buzzer sounds (at intervals for a maximum of 1 hr) to let you know the programme has finished.

A continuous alarm will sound if there is a fault even if the buzzer has been switched off.

Delay start
You can delay the start of a programme by 30 minutes up to 24 hours.

Select a programme.

Press the Delay start button repeatedly until the required delay period shows in the display.

– The Delay start indicator light will flash.
– Times of up to 10h are selected in steps of half an hour, and more than 10h in one-hour steps.
– If you keep the Delay start button pressed in, the time will continue to increase up to 24h.

To begin delay start

Press the Start/Stop button.

– The Delay start indicator will light up constantly.
– Delay start times of more than 10h will count down in hours, and of less than 10h in minutes to the start of the programme.
– The drum will turn briefly every hour to help prevent creasing.

To cancel / alter delay start

Press the Start/Stop button to cancel delay start.

To alter the delay start time, press the Delay start button repeatedly until the required delay period shows in the display.

Press the Start/Stop button to start the altered delay start time counting down from the beginning again.

To add laundry after the delay start time has started counting down

While the delay start time is counting down, you can still add laundry to the drum:

Switch the dryer off.

Opening the door without switching the dryer off will cancel delay start.

Open the door and add the laundry.

Close the door and switch the dryer back on again.
## Programme chart

### Cottons ** Max. load 7 kg*

**Use for**
- Cotton items such as those described under *Cottons Normal* with normal residual moisture levels.

**Notes**
- Items are dried to a *Normal* level only.
- The *Cottons* programme is the most energy-efficient for drying cotton items with normal residual moisture levels.

### Extra dry, Normal

**Use for**
- Single and multi-layered cotton fabrics such as towelling, T-shirts, underwear, flannelette bed linen.

**Notes**
- Select *Extra dry* for multi-layered and very thick fabrics.
- Do not use *Extra dry* for loopknit fabrics (e.g. T-shirts, underwear, baby clothes), as they have a tendency to shrink.

**Low temperature**
- Select the Low temperature option for delicate fabrics with the symbol on the care label.

### Hand iron, Machine iron

**Use for**
- Cottons or linen fabrics, e.g.: table linen, bed linen, starched laundry.

**Note**
- To prevent laundry from drying out it should be rolled up until you are ready for ironing.

**Low temperature**
- Select the Low temperature option for delicate fabrics with the symbol on the care label.

### Minimum iron Max. load 3.5 kg*

**Normal, Hand iron**

**Use for**
- Minimum iron items made of cotton, synthetic or blended fabrics, e.g.: dresses, trousers, skirts and table cloths.

**Low temperature**
- Select the Low temperature option for delicate fabrics with the symbol on the care label.

---

* Weight of dry laundry

** Note for test institutes:
- Test programme in accordance with regulation 392/2012/EU for the energy label, measured according to EN 61121

| Notes | – This programme only fluffs up woollen garments. They are not dried completely by this programme.  
– Remove garments as soon as the programme has finished and leave to finish drying at room temperature. |
| Low temperature | Low temperature cannot be deselected. |
| **Proofing** | Max. load 2.5 kg* |
| Normal | |
| Fabric type | For drying microfibre fabrics, skiwear, fine, close weave cotton garments (poplin) or tablecloths which are suitable for drying in a tumble dryer and have been treated to provide a water and dirt resistant finish. |
| Notes | – This programme includes a proofing fixing phase.  
– Only use proofing agents containing fluorochemical compounds which are stated by the manufacturer as being "suitable for use on membrane textiles.  
– Do not dry items which have been treated with proofing agents containing paraffin. Fire hazard! |
| **Express** | Max. load 3.5 kg* |
| Extra dry, Normal, Hand iron, Machine iron | |
| Fabric type | Fabrics which can tolerate high temperatures with the ☰ symbol on the care label and which can be dried in the Cottons programme. |
| Note | – The programme duration is shorter. |
| **Automatic plus** | Max. load 5 kg* |
| Normal, Hand iron | |
| Fabric type | Mixed loads of garments suitable for the Cottons and Minimum iron programmes. Sort according to colour. |
| **Denim** | Max. load 3 kg* |
| Normal, Hand iron | |
| Fabric type | Denim garments, e.g. jeans, jackets, skirts, shirts. |
| Low temperature | Select the Low temperature option for delicate fabrics with the ☰ symbol on the care label. |

* Weight of dry laundry
Changing the programme sequence

Once a programme has started

- changing the programme

You cannot change to another programme once a programme has started (this prevents unintentional alterations).

You will need to cancel the current programme before you can select a new one.

- cancelling the programme and then selecting a different programme

■ Press the Start/Stop button.

The items will be cooled down, depending on the temperature reached and how long they have been dried for.

If you press the Start/Stop button again during the cooling down phase, Finish will light up in the display.

■ Press the Door button.

■ Close the door.

■ Select another programme and start it.

- cancelling the programme and then removing the laundry

■ Proceed as described in "Adding or removing laundry after a programme has started" below.

■ Switch the dryer off after closing the door.

Altering Delay start

■ See "Delay start".

Adding or removing laundry after a programme has started

■ Press the Door button.

■ Open the door.

⚠️ Danger of burning:
Do not touch the back of the drum when adding or removing items. The drum and the items can get very hot.

■ Add or remove items as required.

■ Close the door.

■ Press the Start/Stop button.

Time remaining

The time left shown in the display may now vary from the actual drying time.
Electronic system lock

The system lock prevents the dryer being used without your knowledge.

It can be activated if wished.

The dryer’s electronics are then locked. The dryer can still be switched on but a programme cannot be started.

– If an attempt is made to start a programme, the indicator light for the Low temperature button will come on and a key symbol 0-§ will appear in the display.

The door is not locked and can be opened at any time.

To activate the lock

Before you begin, first ensure that:

– The tumble dryer is switched off.
– The door is closed.

1 Press the Low temperature button and keep it pressed in whilst carrying out steps 2 to 5.

2 Press the  button in.

The Automatic plus indicator light will come on.

3 Slowly turn the programme selector three positions stage by stage in a clockwise direction.

Each of the three programme indicator lights must come on one after the other.

4 Now slowly turn the programme selector six positions stage by stage in an anti-clockwise direction.

Each of the six programme indicator lights must come on one after the other.

The indicator light for the Low temperature button will flash, and a key symbol 0-§ will appear in the display.

5 Release the Low temperature button.

The electronics have now been locked.

Switch the dryer off.

To deactivate the lock

Before you begin, first ensure that:

– The tumble dryer is switched off.
– The door is closed.

1 The procedure is the same as for activating the lock. Carry out steps 1 to 5 as described previously.

At step 5 the indicator light for the Low temperature button will stop flashing and the key symbol 0-§ will go out.

The electronics are no longer locked.
Cleaning the fluff filter

The fluff which is created by the drying process is collected in the fluff filter in the door. Clean the filter after each drying cycle*.

* Always check the fluff filter if the Clean out airways indicator light comes on.

Cleaning whilst dry

Tip: You can also use a vacuum cleaner to remove the fluff.

- Open the door and pull the fluff filter (1) out of the door as illustrated.
- Use your fingers to remove the fluff from the surface of the filter.
- Remove any fluff from the hollow part of the door opening. You could also use a cleaning brush which is available as an optional extra from your Miele dealer or the Miele Spare Parts Department, or use a vacuum cleaner.
- Also clean the door seal (2) with a damp cloth.
- Once clean, push the filter back into the door holder until it clicks into position. Ensure it is facing the correct way. Close the door.

Cleaning with water

If there is still a great deal of compacted fluff on the filter after cleaning it as described above, you can clean it with water.

- Rinse the filter under hot, running water.
- Dry the filter carefully and thoroughly.
Cleaning the grilles in the door opening

Clean the grilles in the door opening and also the area underneath them from time to time.

- Turn dial 1 on each grille until you hear it click.
- Take hold of the dial, and pull the grille out of the door opening as shown 2. Do the same on the other side.
- Clean the grilles under hot running water, and dry thoroughly.
- Also clean the area underneath them, e.g. with a vacuum cleaner.
- Replace by inserting them at the bottom and pressing them into place at the top.
- Lock both dials (you will hear them click).

Cleaning the tumble dryer

Disconnect the tumble dryer from the mains electricity supply.

Miele branded cleaning and conditioning products are available to order via the internet on www.miele-shop.com.

- Clean the housing, control panel and door seal with a slightly damp cloth and a mild detergent or soapy water.
- The drum and other stainless steel parts can be cleaned with a suitable stainless steel cleaner following the manufacturer's instructions.

Do not use solvents, abrasive cleaners, glass cleaners or all-purpose cleaners. These could damage plastic surfaces and other parts. The tumble dryer must never be hosed down.

- Dry all parts with a soft cloth.
With the help of the following notes minor faults in the performance of the appliance, some of which may result from incorrect operation, can be put right without contacting the Service Department.

⚠️ Repair work to electrical appliances should only be carried out by a suitably qualified person in strict accordance with current local and national safety regulations. Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held liable for unauthorised work.

### Check and fault messages

<td>The lighting switches off automatically (to save energy).</td>
<td>Switch the dryer off and then on again.</td>
</tr>
<tr>
<td></td>
<td>The lamp needs changing.</td>
<td>Change the lamp as described at the end of this section.</td>
</tr>
</tbody>
</table>
Changing the lamp

Disconnect the tumble dryer from the mains electricity supply.

- Open the door.
You will find the interior light cover at the top of the drum aperture.

- Insert a suitable tool, such as a wide bladed screwdriver, under the side edge of the light cover as illustrated.

- Apply a little pressure and whilst doing so turn your wrist in the direction of the arrow to open the cover.

The cover will open downwards.

The temperature resistant lamp should only be ordered from your Miele Dealer or the Miele Spare Parts Department.

The light specification and maximum wattage is stated on the data plate and on the light cover.

- Turn the light anti-clockwise to remove.

- Replace the lamp.

- To close the cover push it upwards and press it on the left and right until you hear it click into position.

⚠ Ensure that it is fitted into position securely, as any moisture could cause a short circuit.
After Sales service

Repairs
In the event of any faults which you cannot remedy yourself, please contact
- your Miele dealer or
- the Miele Service Department (see back cover for contact details).

When contacting your dealer or the Service Department, please quote the
model and serial number of your appliance, both of which are shown on
the data plate. This is visible when you open the door.

N.B. A call-out charge will be applied for service visits where the
problem could have been resolved as described in these instructions.

Future updates (PC)
The indicator or check light marked PC on the fascia panel is the interface used
by the Miele service technicians during service work for testing purposes and
for updating the appliance's programme data.

Appliance guarantee
In the U.K. your appliance is guaranteed for 2 years from the date of
purchase. However you must activate your cover by calling 0845 365 6640 or
registering online at www.miele.co.uk.

For information on the appliance guarantee specific to your country
please contact Miele. See back cover for contact details.

Optional accessories
Optional accessories for this dryer are available from your Miele Dealer, the
Miele Spare Parts Department or via the internet at www.miele-shop.com.

Please note that telephone calls may be monitored and recorded for
training purposes.
Installation and connection

Front view

1 Venting connection: rear, right or left  
   (supplied with the rear socket open)
2 Mains connection cable
3 Control panel
4 Door
5 Four height adjustable screw feet
Installation and connection

Rear view

1. Protruding lid for holding when moving the appliance (see arrows)
2. Mains connection cable
3. Venting connection at the rear

Installation site

⚠️ Make sure the dryer door can be opened without hindrance after installation.

Transporting the appliance to its installation site

When moving the appliance, hold it by the lid where it protrudes to the rear of the dryer. To manoeuvre the dryer out of its packing case to its installation site hold it by the front feet and at the back of the lid.

Building under a continuous worktop / in a kitchen run

⚠️ A building-under kit* with a coverplate to replace the appliance lid is required. It must be fitted by suitably qualified person to ensure electrical safety.

N.B. If you wish to push your appliance under a worktop and there is space to do this without removing the lid the building-under kit is not necessary. Otherwise it is essential.

- The building-under kit is supplied with its own installation instructions.
- N.B. When built under drying times may be longer.
- The electrical socket must be located in an accessible position near the appliance.
- The space required by the vent duct must be taken into consideration when calculating the distance between the tumble dryer and a wall or other appliances or furniture on either side.

With niche heights of:

- 830-840 mm, longer screw feet* are required.
- 870-885 / 915-930 mm, one or two raising kits* are required.

* Miele accessory available to order

Replacing the lid

If the lid has been removed in order to fit a coverplate, ensure that, if the lid is ever replaced, it fits securely into the rear holders. Otherwise, it is not properly secure for transport.
Levelling the appliance

The appliance must be perfectly level to ensure safe and proper operation. The screw feet can be adjusted to compensate for any unevenness in the floor.

⚠️ Do not block the gap between the bottom of the tumble dryer and the floor with plinth facings, deep pile carpet, etc. This would hinder a sufficient flow of air to the dryer.

Washer-dryer stack

The tumble dryer can also be combined with a Miele washing machine in a washer-dryer stack. The appropriate "WTV" stacking kit (available to order) to match your dryer is required.

⚠️ Stacking kits must only be installed by a suitably qualified fitter.
Electrical connection

Electrical connection U.K.

All electrical work should be carried out by a suitably qualified and competent person, in strict accordance with current national and local safety regulations (BS 7671 in the UK).

Ensure power is not supplied to the appliance until after installation work has been carried out.

The appliance is supplied with a mains cable with moulded plug ready for connection to a 230-240V mains supply. Please ensure the connection data quoted on the data plate match the household mains supply.

Connection should be made via a suitable switched socket which is easily accessible after installation.

For extra safety it is advisable to protect the appliance with a suitable residual current device (RCD). Contact a qualified electrician for advice.

Do not connect via an extension lead. Extension leads do not guarantee the required safety of the appliance (e.g. danger of overheating).

Non-rewireable plugs BS 1363

The fuse cover must be refitted when changing the fuse, and if the fuse cover is lost, the plug must not be used until a suitable replacement is obtained. The colour of the correct replacement cover is that of the coloured insert in the base of the plug, or the colour that is embossed in words on the base of the plug (as applicable to the design of plug fitted).

Replacement fuses should be ASTA approved to BS 1362 and have the correct rating. Replacement fuses and fuse covers may be purchased from your local electrical supplier.

WARNING: THIS APPLIANCE MUST BE EARTHED
General

Important

Before operating the tumble dryer, a suitable ducting system must be installed to carry the moist air from the dryer to the outside. This can be: . . . flexible ducting hose, or plastic piping connected to the dryer, or . . . the dryer may be connected directly to the wall vent.

- Before installing the ducting system, ensure that the appliance is not connected to the power supply.

- The ducting outlet (e.g. wall pipe) should be installed in such a way that the moist expelled air . . . . . . cannot be drawn back into the room in which the dryer is installed; . . . cannot cause any damage to the building or other nuisance.

- The dryer uses the room air. It is therefore essential to ensure adequate ventilation to avoid the danger of asphyxia caused by gases given off by other appliances being drawn back into the room. Insufficient ventilation will also cause drying times to be considerably longer. Ventilation can be maintained by:
  - an open window;
  - an air inlet which cannot be blocked in windows, doors and outside wall vents;
  - a window switch which prevents the dryer being used when the window is closed.

Avoid:

- very long ducting systems
- too many bends or corners, tight corners

Otherwise the drying result will be less effective and it will take longer and use more energy.

Suitable materials

- for the ventilation ducting: flexible ducting* or plastic piping with a diameter of at least 100 mm.
- for venting to the outside: a wall pipe kit* or a window vent kit*.

* Available as an optional accessory from your Miele dealer or the Miele Spare Parts Department.

Procedure

First measure the duct length required. Calculate the effective duct length and establish the internal duct diameter required (use the tables on the next page).

The longer the ducting, the larger the internal diameter of the ducting required.

Then decide which type of ducting you want to use (see "Venting systems" in this section).
Calculating the total duct length:

Friction against the inner walls of the ducting will slow down the expelled air as it passes through. An elbow, bend, non-return flap or wall vent creates more friction than a straight duct. The friction created by each of these is expressed as an **additional duct length factor**. The additional length factors are calculated by comparing the friction created by, for example, an elbow to that created by 1 metre of straight plastic piping (Table I).

The additional duct length factor for each item needs to be added together to ascertain the **total duct length** required.

A larger **internal duct diameter** also helps reduce friction. If the total duct length is more than 20 m the duct diameter should be increased (Table II).

1. To calculate the total duct length required:
   - First measure the distance which will require **straight ducting**. Multiply this amount by the corresponding additional duct length factor in Table I.
   - Establish the number of angles, bends etc. necessary and add their additional duct length factors together with the help of Table I.
   - Add all the additional duct length factors together to get the total duct length.

2. Internal duct diameter

   - Refer to Table II for the appropriate duct diameter required.

<table>
<thead>
<tr>
<th>Table I</th>
<th>Additional duct length factor</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Flexible ducting</strong>*</td>
<td></td>
</tr>
<tr>
<td>– 1 m laid straight</td>
<td>1.8 m</td>

<table>
<thead>
<tr>
<th>Table II</th>
<th>Internal duct diameter required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum total duct length allowable</td>
<td></td>
</tr>
<tr>
<td>20 m</td>
<td>100 mm</td>
</tr>
<tr>
<td>40 m</td>
<td>125 mm</td>
</tr>
<tr>
<td>100 m</td>
<td>150 mm</td>
</tr>
</tbody>
</table>
Calculation example

A Wall pipe, with louvred vent
= 1 x 3.8 m Additional duct length = 3.8 m

B/D 2 Elbows, 90°
= 2 x 0.8 m Additional duct length = 1.6 m

C 0.5 m plastic piping
= 0.5 x 1 m Additional duct length = 0.5 m

E Side connection, left
= 1 m Additional duct length = 1.0 m

Total duct length = 6.9 m

Result: A duct diameter of 100 mm is adequate as the total duct length is less than the 20 m specified in Table II.

Installation to the rear, left or right side of the appliance

At the rear
The dryer is delivered with this connection open.
- Fit one of the venting systems described on the following pages.

Left or right side of the appliance

- Turn the cover flap anti-clockwise.
- Refit it securely in the rear outlet.
- Fit one of the venting systems described on the following pages.
Venting systems

The various venting systems which are possible are described on the following pages.

A Flexible ducting hose
B Plastic piping
C Connecting directly to a wall vent

Flexible ducting hose

This is a simple, cost effective way of directing the moist air outside. The adapter supplied is fitted into the vent opening on the dryer and the 100 mm Ø ducting hose is then connected to the adapter.

- The following items are required: . . . flexible ducting hose . . . a wall vent kit* or window vent kit*.
  * (Miele optional accessory).

1 Insert adapter (1) into the vent opening on the dryer.
2 Attach the hose (2).

Installation examples are shown on the next page.
**Installation examples**

**Window vent**

1. Window vent kit (fitted in a "plexiglass" pane) (separate fitting instructions are supplied with the Miele window vent kit)

2. Adapter for flexible hose

**Connection to an exhaust flue**

1. Pipe with connection piece (= supplied with the Miele wall vent kit)

2. Adapter for flexible hose

3. Exhaust flue insulated against damp

⚠️ The ducting must not be vented into a chimney or vent flue which is in use, nor should it be connected to ducting which ventilates rooms with fireplaces.
### Plastic piping

Plastic piping is a good option where the vented air has to be ducted for some distance. The smooth walls of the pipe create less friction for the vented air than the walls of a flexible vent hose, for example. Time and energy consumption are better with plastic piping.

The following items are required:

- An adapter* (Ø 100 mm).
- A wall vent kit* or window vent kit*.
- Suitable piping (Ø 100 mm) is available from your dealer or builders merchants. Where the pipe diameter is more than 100 mm, an adapter is necessary (e.g. from Ø 100 to 125 mm) to connect the pipe to the dryer.

* Available as an optional accessory from your Miele dealer or the Miele Spare Parts Department.

#### Example

1. Wall vent kit (Separate fitting instructions are supplied with the Miele wall vent kit).
2. Adapter
3. Plastic piping, diameter DN 100

The plastic pipe (2) is connected to adapter (1) which is fitted into the vent opening on the dryer.
© Connect directly to a wall vent

The best method of venting the dryer is to connect it directly to the outside wall of a room. Time and energy consumption are better with plastic piping. This involves boring through an outside wall.

A wall pipe* and a flexible foam gasket* must be used (* Miele optional accessories).

1. Before drilling into the wall, . . .
   . . . please read the installation instructions supplied with the Miele wall vent kit.
   . . . and study the following diagrams.

View from above:

1. Wall pipe
2. Flexible foam gasket

Side view:

2. Fit the foam gasket (2) onto the adapter (1) on the wall pipe.

3. Push the dryer up against the wall.
Installation - venting

Washer-dryer stack

Height of venting outlet for washer/dryer stack

Example: Miele washing machine with straight or sloping fascia

Stacking kit* without pull-out shelf:
A = 94.2 cm
B = 170.0 cm

Stacking kit* with pull-out shelf:
A = 92.8 cm
B = 168.6 cm

1. Weight of dry laundry
2. Test programme in accordance with Regulation 392/2012/EU for energy labelling measured in accordance with EN 61121.

All data was calculated using EN 61121 unless otherwise stated.

Power consumption when switched off 0.10 W
Power consumption when not switched off 3.50 W

Notes for test institutes:

Before testing in accordance with EN 61121, dry a 3 kg load of cotton laundry with 70% residual moisture as per the above standard using the Cottons Normal programme without any extra options.

Consumption data can vary from the nominal values given above depending on the size of the load, types of textiles, residual moisture levels after spinning, fluctuations in the electricity supply and any extra options selected.

Altering the residual moisture level in the Cottons programme

The tumble dryer is designed to dry effectively using as little energy as possible. However, if you require the laundry to be drier or damper, you can reduce or increase the default residual moisture in the Cottons programme.

Please note: The Cottons programme will remain unchanged.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

- The Low temperature indicator light will flash once briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Increased residual moisture. Laundry damper.

1 Standard residual moisture (factory default setting) (the Automatic plus indicator light will also flash once).

2 Reduced residual moisture. Laundry drier. (the Automatic plus indicator light will also flash twice).

4 Pressing the Start/Stop button switches between the options.

5 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 3.
- Switch the dryer off after step 3.
Programmable functions

Altering the residual moisture level in the Minimum iron programme

The tumble dryer is designed to dry effectively using as little energy as possible. However, if you require the laundry to be drier or damper, you can reduce or increase the default residual moisture in the Minimum iron programme.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.
1. Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2. Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3. . . . and then release the Start/Stop button.

4. Press the Low temperature button once.
- The Low temperature indicator light will flash twice briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Increased residual moisture. Laundry damper.
1 Standard residual moisture (factory default setting) (the Automatic plus indicator light will also flash once).
2 Reduced residual moisture. Laundry drier. (the Automatic plus indicator light will also flash twice).

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Anti-crease helps prevent creasing, if laundry is not normally removed immediately after the end of a programme.

The anti-crease function

- is activated when the tumble dryer is delivered. You can shorten the duration of the anti-crease phase or deactivate it if wished.
- is used in all programmes except Woollens handcare.
- should be left activated.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:

- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button twice.

- The Low temperature indicator light will flash 3 times briefly.

Programmable functions

A number to show which option is selected will appear in the display alternating with the letter P.

0 Anti-crease off

1 1 hour anti-crease
   (the Automatic plus indicator light will also flash once).

2 2 hours anti-crease
   (factory default setting)
   (the Automatic plus indicator light will also flash twice).

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:

- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Programmable functions

Altering the volume of the buzzer

The buzzer has two volumes.

Follow the steps (1, 2, 3 ... ) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button three times.

- The Low temperature indicator light will flash four times briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Normal buzzer (factory default setting)

I Loud buzzer (the Automatic plus indicator light will also flash)

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Altering the standard drying level in the Automatic plus programme

The tumble dryer is designed to dry effectively using as little energy as possible. However, if you require the laundry to be drier or damper, you can reduce or increase the default residual moisture in the Automatic plus programme.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on.
Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button four times.
- The Low temperature indicator light will flash six times briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Increased residual moisture.
Laundry damper.

1 Standard residual moisture (factory default setting)
(the Automatic plus indicator light will also flash once).

2 Reduced residual moisture.
Laundry drier.
(the Automatic plus indicator light will also flash twice).

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.
The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Extending the cooling down time

The cooling down phase which takes place before the end of a programme can be extended by 5 or 10 minutes, if required. This makes the garments easier to handle.

The cooling down time can only be extended for programmes with drying levels.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:

- The tumble dryer is switched off.
- The door is closed.

Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

. . . and then release the Start/Stop button.

Press the Low temperature button five times.

- The Low temperature indicator light will flash seven times briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Cooling down time not extended (factory default setting)

1 Cooling down time extended by five minutes (the Automatic plus indicator light will also flash once).

2 Cooling down time extended by ten minutes (the Automatic plus indicator light will also flash twice).

Pressing the Start/Stop button switches between the options.

Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:

- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
**Standby**

To save energy, the display and the programme sequence/check lights go out after 10 minutes and the Start/Stop button starts flashing slowly.

To come out of standby mode

- Turn the programme selector or press a button. Neither will have any effect if a programme is running.

**On**

The standby function is activated and the display and programme sequence/check lights will go out after 10 minutes:

- if a programme is not selected after the dryer has been switched on.
- after a programme has started.

They will, however, come on for 10 minutes after a delay start time has counted down, at the end of the programme or the end of the anti-crease phase. The buzzer (if selected) will sound for 10 minutes at the end of the programme.

**Factory default. Not in current programme**

As described under "On". However, the display and programme sequence/check lights will stay on after the programme has started and remain visible during the programme.

**Off**

The display and programme sequence/check lights will stay on while the dryer is switched on.

**Follow the steps (1, 2, 3 ...) to programme and store in memory.**

- See next page.
Programmable functions

Before you begin, ensure that:

- The tumble dryer is switched off.
- The door is closed.

1. Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2. Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3. . . . and then release the Start/Stop button.

4. Press the Low temperature button six times.

- The Low temperature indicator light will flash 8 times briefly.

A number to show which option is selected will appear in the display alternating with the letter P.

0  On

1  Factory default setting. Not in current programme (the Automatic plus indicator light will also flash once).

2  Off (the Automatic plus indicator light will also flash twice).

5. Pressing the Start/Stop button switches between the options.

6. Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:

- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Memory function

The electronics will store in memory a drying level or extra options for a selected programme. The duration selected for the timed drying programmes will also be stored in memory. These settings will be selected automatically the next time the programme is chosen. You can either accept these or change them by pressing the appropriate button.

Please note: The **Cottons** programme will remain unchanged.

Follow the steps (**1, 2, 3**) to programme and store in memory.

Before you begin, ensure that:

- The tumble dryer is switched off.
- The door is closed.

**1** Press the **Start/Stop** button and keep it pressed in whilst carrying out steps **2 - 3**.

**2** Switch the dryer on.

Wait until the **Start/Stop** button lights up constantly . . .

**3** . . . and then release the **Start/Stop** button.

**4** Press the **Low temperature** button seven times.

- The **Low temperature** indicator light will flash 9 times briefly.

A number to show which option is selected will appear in the display alternating with the letter $P$.

Memory deactivated
(factory default setting)

Memory activated
(the Automatic plus indicator light will also flash)

**5** Pressing the **Start/Stop** button switches between the options.

**6** Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:

- Carry out steps **1** to **4**.
- Switch the dryer off after step **4**.
Clean out airways indicator

Fluff should be removed after drying. The Clean out airways indicator will remind you to clean the filters when a certain amount of fluff has collected in the filters. You can decide at what level of fluff this reminder should be given.

You will have an idea of how often this should be done after a few drying programmes.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on. Wait until the Start/Stop button lights up constantly.

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button eight times.
- The Low temperature indicator light will flash on and off slowly once.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Clean out airways indicator light deactivated

1 Clean out airways indicator light comes on when there is a heavy build-up of fluff (the Automatic plus indicator light will also flash once).

2 Factory default setting (the Automatic plus indicator light will also flash twice).

3 Clean out airways indicator light comes on when there is only a light build-up of fluff (the Automatic plus indicator light will also flash three times).

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Keypad tone

An audible tone sounds each time a button is pressed.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:

– The tumble dryer is switched off.
– The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 – 3.

2 Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button nine times.

– The Low temperature indicator light will flash on and off slowly once and then on and off quickly once.

A number to show which option is selected will appear in the display alternating with the letter P.

0 Keypad tone deactivated (factory default setting)

1 Keypad tone activated

(the Automatic plus indicator light will also flash)

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:

• Carry out steps 1 to 4.
• Switch the dryer off after step 4.
Programmable functions

Adjusting the dryer's electronics for very soft water

⚠️ In some areas of the UK, water is extremely soft which can affect the sensitivity of the control electronics. If the dryer is installed in an area of very soft water, you should contact your local water supplier for information and advice regarding water hardness and water conductivity. If the water conductivity is less than 150 µS, the following programmable function will need to be activated.

Important. This programmable function should not be activated if, despite the water being extremely soft (as would be the case if a water softener were used), its conductivity is greater than 150 µS.

Follow the steps (1, 2, 3 ...) to programme and store in memory.

Before you begin, ensure that:
- The tumble dryer is switched off.
- The door is closed.

1 Press the Start/Stop button and keep it pressed in whilst carrying out steps 2 - 3.

2 Switch the dryer on.

Wait until the Start/Stop button lights up constantly . . .

3 . . . and then release the Start/Stop button.

4 Press the Low temperature button ten times.

- The Low temperature indicator light will flash on and off slowly once and then on and off quickly twice.

A number to show which option is selected will appear in the display alternating with the letter P.

Factory default setting

1 Adjusted for very soft water
   (the Automatic plus indicator light will also flash)

5 Pressing the Start/Stop button switches between the options.

6 Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

To check the setting:
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.
Extending the range of the drying levels

You can extend the range of the drying levels for many of the programmes:
- **Machine iron+** (drier than Machine iron).
- **Slightly dry** (drier than Hand iron).
- **Normal+** (drier than Normal).

This programmable function is only available for programmes with drying levels.

**Follow the steps (1, 2, 3 ...) to programme and store in memory.**

**Before you begin, ensure that:**
- The tumble dryer is switched off.
- The door is closed.

1. Press the **Start/Stop** button and keep it pressed in whilst carrying out steps 2-3.
2. Switch the dryer on.

Wait until the **Start/Stop** button lights up constantly . . .

3. . . . and then release the **Start/Stop** button.
4. Press the **Low temperature** button eleven times.

- The **Low temperature** indicator light will flash on and off slowly once and then on and off quickly three times.

A **number** to show which option is selected will appear in the display alternating with the letter **P**.

- **Factory default setting**
  - **Drying level range extended** (the **Automatic plus** indicator light will also flash).
  - Pressing the **Start/Stop** button switches between the options.
  - Switch the dryer off.

The setting you have selected is now stored in memory. You can change it again at any time.

**To check the setting:**
- Carry out steps 1 to 4.
- Switch the dryer off after step 4.

**To select the extended drying level**
- Select a programme.
- Press the drying level button repeatedly until one or two indicator lights come on.
  - Indicator lights **Extra dry** and **Normal** = Normal+
  - Indicator lights **Normal** and **Hand iron** = Slightly dry
  - Indicator lights **Hand iron** and **Machine iron** = Machine iron+
